

# MICRO SYSTEMATION

THE LEADER IN MOBILE DEVICE FORENSICS

## THE SOLUTION

# WHAT MAKES US DIFFERENT?

## THE COMPANY

Micro Systemation is the leader in Mobile Device Forensics.

We provide a complete forensic package for electronic mobile devices and our core focus is to provide high quality solutions that create secure and trusted results for end users.

Micro Systemation is based in Sweden and has offices throughout Europe and the USA, as well as a network of distributors across the globe. Our XRY software is used today in over 50 countries and has been used by investigators to quickly and effectively retrieve information since 2002.

We enjoy a privileged relationship with our clients and it is our intention to keep it that way by listening to user feedback and constantly improving our solutions to meet future requirements.

**BETTER DATA** The XRY system is the first choice among law enforcement agencies worldwide.

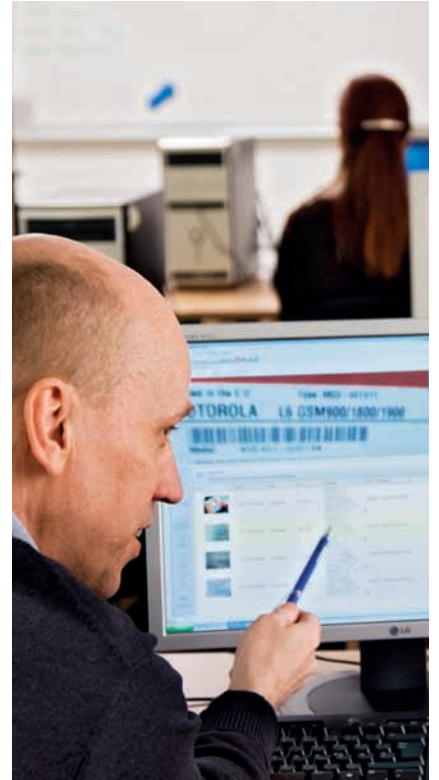

XRY is the ultimate solution for recovering data from mobile devices in a forensically secure manner. It is the result of years of development and user feedback, to create a refined, easily understood forensic examination process for mobile devices.

The software is powerful enough to deal with all of the modern demands of digital examiners. The user interface is simple to navigate and the wizard will help guide you through the entire process from start to finish, so you can immediately recover data with confidence.

XRY is fully tested and documented for every device we support. As a Windows based solution you have the flexibility to change hardware platforms to suit your needs.

**“Having used XRY daily for the past 3 years it is simply the most efficient and reliable mobile phone forensic software available. XRY regularly updates its software, which, in the fast moving world of mobile phone and Sat Nav technology is essential. XRY is all that is needed to recover live and deleted data and produce the results in a clear and concise report. I have tried other forensic recovery software but none come close to XRY!”**

HAMPSHIRE CONSTABULARY, FORENSIC MOBILE PHONE EXAMINER, UNITED KINGDOM

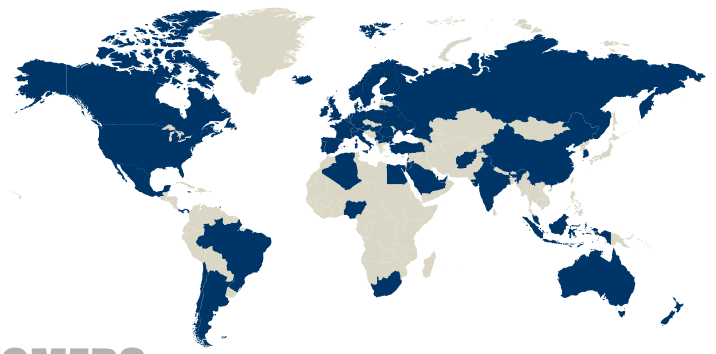

**BETTER SUPPORT** We have created a unique help manual to fully document what data you can expect to recover from each device, and just as importantly; what data you should not expect to retrieve from a device.

We know your time is precious so we have built an intuitive interface; the XRY wizard will provide assistance to identify a device quickly and effectively. In addition you have the help of MSAB's Support Team at your assistance should you ever require technical support, by telephone, email or via our web forums.

We provide a fast and responsive front line support team to ensure examiners get the answers they need as quickly as possible. Should you ever need it, you will be able to get help fast from one of our support team who have direct access to all our technical experts.

**“Support from MSAB is by far the best. Almost immediate response!”**

US FORENSIC INVESTIGATOR

**BETTER REPORTS** Our focus is about giving you the information you need as soon as possible. We present the data immediately to view directly after the extraction and a tamper-proof report is created within minutes.

We present that information in many ways to suit your needs; XRY allows for exporting to XML, Excel, Word, Open Office, Print or even Google Earth depending upon your requirements. You can also select to show only the relevant data for your reports. You can add a column for comments and personalise the report for your own organisation with logos and user specific case fields.

XRY software maintains the integrity of the information extracted, eliminating all risk of evidence manipulation. The XRY report contains an audit log trail showing how the data was recovered and cannot be changed. This ability to trace the process and show how results were acquired is a critical advantage in legal proceedings as part of the evidence chain.

With our free XRY reader application authorised persons can also access the report in its native file format, to allow them to review all the relevant information including pictures and video evidence.

**BETTER TRAINING** Training is invaluable when it comes to getting the most out of a system. XRY training helps users take full advantage of this powerful application. Our certification courses ensure students always have the highest level of knowledge and understanding about mobile device technology.

The training is always hands on with material from live devices. You are taught effective ways to get the most out of XRY by experienced trainers and have the opportunity to network with other investigators attending the course.

You may attend training classes in open courses or we can bring the training to you on site to suit your needs. A certified mobile investigator can do their job more easily, efficiently and in less time.

## THE CUSTOMERS OUR MARKETS AND USERS

Micro Systemation supplies government, military, intelligence, private sector and law enforcement agencies throughout the world. Our customer base is both diverse and impressive, ranging from individual investigators to major international agencies all of whom need to be able to secure intelligence from mobile devices. We take great care of our customers and always respect the need for confidentiality. For obvious reasons most of the details about our customer base remains confidential but below are some of the comments our customers have been kind enough to allow us to reproduce:

I have used XRY and other systems, both in tactical and strategic commands and find XRY has many advantages over the competition. It's an easy choice if one has tested, for themselves the abilities of each system as I have.

U.S. DEPARTMENT OF DEFENSE,  
UNITED STATES

I've been using XRY and XACT on an almost daily basis for the last 4 years extracting data from hundreds of phones involved with criminal activity here in Australia. I've used other mobile phone extraction tools, none of them being as successful in extracting data or reporting.

VICTORIA POLICE ELECTRONIC CRIME SQUAD,  
AUSTRALIA

XRY is a software solution, complete with all the necessary hardware for recovering data from mobile devices.

## KEY BENEFITS OF USING MICRO SYSTEMATION TECHNOLOGY:

- >> Tested and approved by law enforcement and national defense agencies worldwide.
- >> Fully tested and documented support for all the major mobile phone manufacturers models.
- >> Purpose built software based solution designed for Windows.
- >> Fast and efficient data extraction via an easy to use wizard.
- >> Reports are immediately available, forensically secure and auditable with a log report.
- >> Quality training and certification programs are available to users.
- >> Fast, reliable and responsive technical support.
