When seizing a mobile device to acquire digital evidence and intelligence, it is important to immediately protect the device from outside interference. If you don’t, the data inside can be altered and/or deleted remotely by the device owner, by someone else or by an automated service connecting to the device.

An easy and effective way to protect a device from signals and help ensure that the data remains unchanged is to put it in a Faraday bag. This procedural measure also helps you prove data integrity.

MSAB Faraday bags are provided by Disklabs, exclusively manufactured in Britain and of the highest quality. They come in different sizes and shapes, and all of them feature a see-through window that lets you view content displayed on screen while interacting with the device.
PROTECT YOUR EVIDENCE

MSAB Faraday bags are used to securely store and transport mobile phones, tablets and other mobile devices, ensuring that critical evidence and intelligence doesn’t get remotely accessed, locked, altered or wiped. It is best practice to put a seized mobile device into a Faraday bag as soon as possible after obtaining the device from a suspect or at a crime scene or in an investigation. Place the device inside the bag, seal the Velcro fastening and signals are blocked within seconds. It is that simple.

The Faraday bag also protects the device from a variety of environmental factors.

PRODUCT DETAILS

MSAB Faraday bags provide radio frequency (RF) protection and shield devices from all Wi-Fi, mobile (including 2G/3G/4G/5G), Bluetooth, GPS and active RFID signals. They use a double-layered, military-grade Faraday shielding conductive mesh, coated in rip-stop nylon, and covered in a polyurethane outer skin.

We provide two different standard bag sizes for mobile phones and tablets, but we can also provide many other sizes upon request.

Our Faraday bags are reusable and their small form factor makes them easy to handle and carry. Unlike other bags which require “rolling over”, similar to a water-proof bag, our bags offer better protection with Velcro fastening, proven to provide optimal protection.

MSAB Faraday bags feature a see-through window that lets you view content displayed on screen while interacting with the device.

Provided by Disklabs

Our Faraday bags are designed and hand crafted in Britain by Disklabs experts. The manufacturer is ISO9001 approved.
