

# XRY

## Camera

## XRY Camera - Gather supporting picture and video evidence

The XRY Camera allows forensic examiners to capture pictures of mobile devices and relevant screenshots to complement their digital extractions. Working with all MSAB platforms, you can now gather supporting evidence to include during forensic examinations of mobile devices and include them in evidential XRY Case Files.

+ SUPPORTING FORENSIC EVIDENCE

+ HIGH DEFINITION USB CAMERA

+ ADD EXAMINER NOTES

## GATHER SUPPORTING EVIDENCE

The XRY Camera allows forensic examiners to capture pictures of mobile devices and relevant screenshots to complement their digital extractions. Working with all MSAB platforms, you can now gather supporting evidence to include during forensic examinations of mobile devices and include them in evidential XRY Case Files.

Using a dedicated USB high definition camera, pictures can be reviewed live on screen prior to capture and examiner notes added real-time to support your case. Images can be viewed, selected and deleted as required and inserted into any relevant XRY category at any stage of the process.

## CAPTURE VISUAL IDENTIFIERS AND SCREENSHOTS

Sometimes a screenshot is the only way to capture relevant evidence and help validate device extraction results. The screenshots show exactly how the information appeared on the screen of the device at the time of examination, in an evidentially sound manner.

XRY Camera is particularly useful for capturing smudge markings on a smartphone screen, unusual identifying features or recording the IMEI on the device sticker underneath the phone battery.
