

For all your Mobile and Computer Forensic needs

MSAB & Detego Global are pleased to offer one solution from extraction to analysis, regardless of what platform your digital forensic acquisition began from.

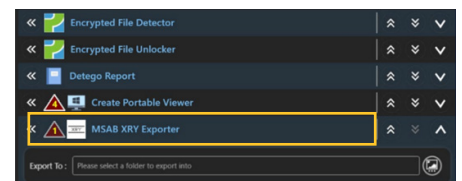

Extraction completed with MSAB XRY; you can then use MSAB XAMN to export directly to Detego allowing you to choose your analytical platform of choice.

Any Acquisitions started in Detego can also be exported as a .XRY file for ingestion to MSAB XAMN, meaning you can use the full power of MSAB XAMN to process and analyze a mixture of computer and mobile devices.

Together, you can power through backlogs by using the products seamlessly depending on the case parameters.

Easily export your XRY extractions for direct import into Detego software

Export your Detego based data to a .xry-file for analysis in XAMN.
