MSAB Kiosk: powerful mobile forensics that anyone can use

The MSAB Kiosk offers the proven power of XRY mobile forensic software through a turnkey terminal that is simple enough for anyone to use.

The Kiosk uses a simplified touch screen interface that guides users through extractions step by step according to a predefined workflow, which can be customized to your organization's unique needs and requirements. It is designed for operational frontline users where mobile data recovery and analysis is just one part of their responsibilities, enabling them to quickly perform extractions successfully and consistently with minimal training.

The MSAB Kiosk has been instrumental in empowering many organizations worldwide to scale up their capabilities and decentralize their mobile forensic operations for increased efficiency, eliminating delays and device processing backlogs. With the Kiosk, non-expert users can process most devices, to free up digital forensic experts in the labs to focus on the most challenging cases.

MANAGEMENT INFORMATION

POWER AND SIMPLICITY IN A PACKAGE

The customizable workflow on the MSAB Kiosk enables your organization to tailor individual user sequences for different types of users and skill levels. A sequence can work like a software “wizard” which enables almost anyone in your organization to perform mobile device extractions with confidence. Step by step guides and sequences can be configured to align with your organization’s practices and regulations. They can instruct and even lock user groups to specific instructions and actions – ensuring that every user follows approved, consistent processes – in turn ensuring evidence integrity and compliance.

RAPID REVIEW FOR TRIAGE

The Kiosk enables users to undertake rapid controlled extractions at the first available opportunity and undertake an analysis of the contents, to see exactly what is on the device as quickly as possible. Data input through the workflow can be converted into a standardized forensic report that is automatically captured and generated at the end of the process.

EASILY MANAGED AND NETWORKED

By managing MSAB Kiosks with XEC Director, leaders and administrators can ensure full centralized control in order to communicate with remote users, monitor and report on operations and instantly update the software – all from a single location. All Kiosk user activities can be logged, viewed and exported.

All our tools, including the Kiosk, can be networked to enable centralized storage and seamless transfer of data between users and sites – a huge time and cost saver. Our tools also enable customizable, automated exporting and analysis – features useful for example when screening large volumes of data for threats or known information.

ENSURE ISO STANDARDS COMPLIANCE

Through its locked-down configuration and automatic audit logging, the MSAB Kiosk helps your organization comply with the requirements of ISO 17025 and 27037:2012.

WITH COST-EFFECTIVE TRAINING OPTIONS

Minimal training is required to perform extractions and analyses with the MSAB Kiosk. To help your organization ensure a return on investment we offer both classroom training options and interactive on-demand, online training options to certify users.

PRODUCT HIGHLIGHTS

- » Workflow-guided extraction wizard
- » USB v3.1 extraction port
- » 23.8” Full HD IPS touch screen
- » XAMN Express for review of extracted data
- » File export to disc drive or network

FEATURES

- » Dedicated turnkey terminal solution
- » Unique Help file for every device
- » Easy touch screen data extraction
- » Immediate reporting
- » User control and administration

TOOLS

- » Blu-Ray/DVD/CD burning wizard
- » SIM card reader & clone SIM cards
- » Integrated write protected memory card reader
- » XRY cable kit for all supported devices

SPECIFICATIONS

- » Weight: Approximately 21 kg (46.3 lbs)
- » Size: H 34.39 cm (13.54”) x W 54.00 cm (21.26”)
- » LCD touch screen: 23.8” HD LCD widescreen
- » Hard drive: 256 GB SSD + 1 TB HDD

INCLUDED IN THE KIOSK PACKAGE

- » Up to 3 year hardware warranty available
- » Standard MSAB Kiosk workflow package
- » Network capable for file sharing and storage
- » MSAB tech support and software updates included
