The MSAB Training Academy: XRY Pro Certification Course

Elevate Your Digital Forensics Skills

XRY Pro Certification is an expert-level two-day training course, designed for participants who are seeking to extract from the most challenging and secure critical data mobile devices. This course is designed for forensic lab experts, examiners, and analysts who face cases where data is difficult to extract and standard tools and methods aren't enough.

Why Get XRY Pro Certified?

XRY Pro is a pioneering tool that enables you to bypass supported Android device security, data extraction and decoding; as well as obtain physical extractions from supported Android devices that other tools do not. As device security continues to evolve, so does XRY Pro-this training ensures you stay equipped to succeed in an ever-changing landscape. By becoming certified, you'll improve your ability to tackle complex extractions through advanced techniques and best practices, while also meeting the highest standards of professionalism and competence within the field of digital forensics. Please note that an active XRY Certification is required prior to attending this course.

What You'll Learn:

- Master XRY PRO fundamentals: software, licensing, equipment, support, and Android device coverage
- Compare extraction methods (Full File vs. Physical) and encryption types (BFU/AFU, FDE/FBE)
- Prepare devices: disassembly, chipset ID, test points, and pre-extraction steps
- Export key material and apply brute-force techniques with XRY PRO or BruteStorm (CLI & GUI)
- Optimize performance with distributed computing for password recovery.
- Perform acquisitions: locate exploits, extract RAM, Full File System, or Physical data, including BFU extractions with troubleshooting strategies.

XRY PRO Certification builds the skills and confidence to unlock Android devices, bypass security codes, and perform full extractions or RAM dumps.
