

# XRY Pro Express

Advanced extractions.  
Built for the frontline.

Frontline personnel are under growing strain. Investigations now involve a rapidly growing range of modern mobile devices, each requiring advanced extraction capabilities. Yet many frontline tools offer limited extraction methods, leaving critical data inaccessible.

XRY Pro Express addresses this challenge by bringing the power of XRY Pro into a locked-down workflow tailored according to your organisation's requirements and SOPs. It is an extraction tool purpose-built for trained frontline users, delivering advanced capabilities without added complexity.

- **Advanced device access:** Bypass the most secure devices with XRY Pro's unique and proprietary access methods, along with built-in brute-forcing for Android devices, in a locked-down workflow.
  - **Configurable workflows:** Customizable workflow that can be tailored according to organization requirements and SOPs; ISO 17025 compliant.
  - **Manage user access:** Access can be controlled, ensuring advanced exploits are only available to skilled personnel.
  - **Simple deployment:** Operate like any Windows-based software application, and is easily installed and deployed.
  - **Centralised administration:** Monitor usage and performance, maintain full audit trails, and ensure trained frontline users stay up-to-date via XEC Director.
